

NET New Electronic Technology

NET GMBH LAUNCHES **GimaGO** – CCD CAMERAS WITH GIGABIT ETHERNET INTERFACE

NET New Electronic Technology GmbH an industry leading manufacturer of digital and analog cameras releases **GimaGO** a Gigabit Ethernet camera line. **GimaGO** offers both with monochrome and color CCD image sensors from 1/3" to 2/3" with resolutions from VGA to UXGA. The latest 1/3" CCD with SXGA resolution and high sensitivity in the near IR-spectrum is one feature of the **GimaGO** series. The auto-iris lens control feature supports DC driven lenses to be used with the new camera series to control the incoming light via the lens iris. Also an opto-isolated trigger input and strobe output are integrated in the small 40 x 40 x 45mm **GimaGO** camera line. All models are supported by our viewer software and SDK which is included free of charge in the delivery and are compatible to Matrox and National Instrument libraries.
